

MEMORANDUM

Date September 6, 1967

ANACONDA ALUMINUM COMPANY
COLUMBIA FALLS, MONTANA

SUBJECT: Ambient Air Sampling Program

REFERENCE: _____

FROM: A. W. Hook

TO: C. E. Taylor

Page 2

It is recommended that electrical outlets be provided wherever possible.

SAMPLE LOCATIONS

Sample locations have been selected on a temporary basis until data is obtained to substantiate the correctness of each location for maximum dosage or levels.

The plant engineer, Mr. Robert Sneddon, has been advised of the locations in question with a request to find out the cost of installing electrical outlets wherever possible.

REPORTS

A report will be published each month in conjunction with the regular monthly report.

MANPOWER

The necessary manpower will come from the present staff. Other assignments will be given less priority, at least during the months of the summer and early fall. It is planned that advances in the technology of sampling the scrubber towers will provide the release of existing manpower from such duty that can be used for the ambient air sampling program.

SURVEY

The entire program must be based on a general survey at the plant boundaries over a several month period.

COST

The matter of cost will be estimated and presented as soon as figures are available.
